What's New?

Enhanced performance and expanded big data capability to meet the data handling needs of the future.

It has a new, state of the art graphics engine designed to support, display and manipulate significantly larger data sets than ever before and eliminates the 2GB limitation to design files.

A redesigned internal communications engine provides faster internal data transfer between MineScape's back-end and the new graphics engine which when combined, deliver dramatic graphical performance enhancements with faster visualisation rendering, anti-aliasing, natural and directed lighting, and faster texturing.

Performance improvements with 2D and 3D visualisations result in higher levels of productivity and a better user experience.

CAD Updates: New CAD features include dimensioning tools with snapping support, flexible orientation grids, a new scale bar with user customisation, new north arrow types with user selection and customisation.
